

As Senior Architect with FTL/Happold, Andrew Formichella led the combined Architectural Engineering Team to design and produce this sculptural overlook element. It's a choice location to view the New York City skyline from Staten Island.

Being on an overhead bus ramp, the structure needed to transmit the perpendicular structural loads into the existing structural system. This constraint drove the design process.

Working directly with the steel fabricator Product and Design Inc., and Fabric Structures Inc., Andrew Formichella and David Burke coordinated this complex design from its inception through its completion.

Project:	Staten Island Esplanade
Location:	Staten Island, NY
Client:	Economic Development of NYC
Details:	12 identical units @ 400 ft ² each
Consultants:	Walcavage & Johnson Landscape Architects
